

FAA Safety Team presents:

Energy Management for Pilots

An introduction to the principles of Energy Management (EM) for pilots. Many aviation accidents and incidents are enabled either by having too much or not enough total energy in the aircraft. If a pilot can manage his aircraft's total energy between the two extremes, the chances of a safe flight are vastly improved. This very popular presentation blends theory with some practical applications the audience can begin using immediately, and delves into an accident scenario where EM was a critical factor. No math required!

Directions: Park in short term parking lot. Parking vouchers will be provided. Parking is free. Enter the main terminal building, up the escalator and follow the signs to the safety seminar. Fly-In aircraft, Sheltair is the closest FBO, about a 5 minute walk to main terminal. Sheltair will not charge a ramp fee to seminar attendees on the seminar day. Sheltair phone 386 255 0471.
