Energy Management - An Introduction!

This live seminar has been recently updated and will introduce what Energy Management (E-M) is in a practical sense, and provide useful tips that General Aviation pilots, especially pilots-in-training, can use right away. For many, E-M is a new way of thinking about managing certain critical aspects of any flight. If E-M were better understood among the GA Community, there would most likely be far fewer pilot-induced accidents and incidents!

Our speaker is Bob Jex, FAASTeam Program Manager for Operations from the Orlando FSDO. He has been a passionate proponent of E-M for decades and will share his insights with you. Free to attend, and WINGS credit is available!

Directions: The Embry-Riddle (ERAU) College of Aviation building is near the southernmost corner of Aerospace Blvd where it runs along the flight line portion of the campus. From I-95, take the exit for US-92 / International Speedway Blvd; proceed east on US-92. Follow signs to Embry-Riddle Aeronautical University. Park in lots southeast of the College of Aviation Bldg. Proceed to Room 256.
Fly-ins: Park at Sheltair aviation and request ride to the ERAU College of Aviation Bldg.
