What is NMS?

The brand-new NOTAM Management Service migrates functionality, users, and connections from legacy systems to a single modernized NOTAM system. The new service is securely hosted in the cloud with a streamlined interface, and has a scalable and resilient architecture to accommodate current and future needs. It provides near-real-time data exchange, enabling efficient data flows and better stakeholder collaboration. The new system transforms the management of aeronautical information and supports the FAA's mission to improve airspace safety and efficiency.
