

Sharing the Skies Safely -- Powered and Non-powered Flight

Many who fly believe that gliders (sailplanes) only fly in the vicinity of gliderports. In reality, these planes cover hundreds, if not thousands of miles as they negotiate the skies. Recently, there have been incidents where powered aircraft and gliders and towplanes have come within feet of each other. This seminar will address sailplane awareness for powered aircraft pilots and techniques to see and avoid.

The EAA Meeting Room is within the AOA of Vero Beach Regional Airport. Escorted access is required if not badged for this airport. The access gate will be manned to allow escorted access. A backup number is 952-826-9707 to obtain escorted access.
