

Blessings and Curses of Modern Electronics in the Cockpit

There is so much new electronics available designed to make our flights easier and safer that it is sometime overwhelming--and dangerous. We tend to rely on it so much that sometimes it causes us to overlook flying the airplane. There have been recent accidents where at least one of the causal factors have been lack of attention through the windshield and on electronics on the pilot's lap or on the electronic cluster. This seminar will examine sensory overload and methods to keep attention where it needs to be for continued safety.

This and all subsequent Treasure Coast FAAST seminars will be held in Classroom Coleman of Skyborne Airline Academy. The classroom is in their building which faces Airport Drive (2805). The classroom can be accessed by parking in the parking lot behind the building as entering through the rightmost door.
