

Loss of Control

It is hard to imagine losing control of an airplane in flight. But far too frequently that is exactly what happens and usually with serious results. Most loss-of-control accidents are fatal. These accidents happen in both VFR and IMC conditions, during the day and at night. They are not limited to inexperienced or VFR only pilots. At this informative briefing we will discuss strategies to help you prevent losing control. We will also review some of the safety enhancements recommended by the GAJSC Loss of Control Work Group. You will be given the opportunity to discuss several pertinent case studies selected by the group. Click the link below and register TODAY.

Directions: Located in the Venice City Hall. Use this link for a map and directions:
