

FAASTeam presents:

Mastering an Emergency- Engine failures from A to Z

The simulated engine failure is something we as pilots train many hours on and should be always thinking about as we buckle up for each flight. Are we really prepared for what would turn an uneventful flight to an honest to goodness emergency? This class will cover all phases of engine failure from start to finish and during all phases of flight. We may have heard the term Aviate, Navigate, Communicate which we will break down in detail but this course will also discuss common errors and good techniques to give you the best chance for a landing that you can walk away from.

Please register on our website at <https://www.unitedflight.com/courses>

Directions: Please walk straight back from our front door. Our classroom is about half way down on the left.
