FAASTeam presents:

Winter Weather - What ATC Sees and What It Does Not

Ever wonder what ATC actually sees when the weather starts getting interesting? Join Air Traffic Controller Holly Cron for an inside look at winter weather from the controller's perspective.

We'll explore what Center, Approach, and Tower controllers can and cannot see, the limitations of radar weather displays, and why pilot weather reports (PIREPs) are so important. We'll also discuss weather advisories, ATC broadcasts, and how pilots can communicate effectively to get the best available assistance when conditions deteriorate.

Expect practical examples, valuable safety insights, and a little aviation humor along the way.

West Houston Airport is located north of I-10 between Hwy 6 and Barker Cypress Road.
