

FAASTeam presents:

# **2018 Arkansas Loss of Control Accident and Incident Lessons Learned**

The United States has the largest and most diverse GA community in the world, with more than 220,000 active aircraft, including amateur-built aircraft, rotorcraft, balloons, and highly sophisticated turbojets. Inflight loss of control – mainly stalls – accounts for the largest number of GA fatal accidents. Although the fatal accident rate is declining, Fiscal Year 2017, 347 people still died in 209 general aviation fatal accidents. This seminar will review the loss of control accidents and incidents that occurred in Arkansas during calendar year 2018. We will discuss lessons learned from each case study. As a bonus, we will review the occurrences that had a safe ending in Arkansas, such as in-flight engine failure that a safe landing was made at an airport.

**Directions:** From Little Rock, take Exit 78 at Caddo Valley and turn left onto Highway 7. This becomes 10th Street. Just before you turn into Caplinger's parking lot, you will pass Henderson State University's water fountain on your right and then drive under a pedestrian bridge over 10th Street. Turn left into Caplinger's parking lot just after the pedestrian bridge. From Texarkana, take Exit 73 and turn right onto Pine Street. Follow Pine Street to 10th Street and turn left. You will go straight through the stop light at Henderson Street just before turning right into Caplinger's parking lot.
