

Human Factors Second Monday Aviation Safety Huddle

Most aviation accidents are not caused by mechanical failures, but by human performance limitations. This seminar examines the role human factors play in aviation safety, including decision-making, situational awareness, fatigue, stress, complacency, communication, and error management. Through real-world examples and practical strategies, participants will learn how human factors influence pilot performance and how to recognize and mitigate these risks before they lead to an accident.

EAA Chapter 165 Hangar at North Little Rock Airport. If you drive in, use gate 20 which is just a block south of the main airport entrance on Remount Road

A message from the National FAASTeam Manager
