

Second Monday Aviation Safety Huddle at North Little Rock Airport ORK

In 1934, a single misunderstood hazard forced down 26 passenger planes. It was carburetor icing—a silent killer that became one of aviation's most dangerous blind spots.

What is today's "carburetor icing"?

Every era has a hidden safety threat. This seminar uses aviation history to expose the modern risks, technologies, and assumptions we underestimate right now.

Why attend?

- **Spot the unseen:** Uncover current industry blind spots.
- **Challenge assumptions:** Look beyond standard safety metrics.
- **Predict the future:** Identify tomorrow's defining hazard today.
