

FAASTeam presents:

CRM For The Single Pilot

There is no one right answer in aeronautical decision-making. Each pilot is expected to analyze each situation in light of experience level, personal minimums, and current physical and mental readiness level, and make his or her own decision.

Single-pilot resource management (SRM) is the art of managing all onboard and outside resources available to a pilot before and during a flight to help ensure a safe and successful outcome. Incorporating SRM into GA pilot training is an important step forward in aviation safety. A structured approach to SRM helps pilots learn to gather information, analyze it, and make sound decisions on the conduct of the flight.

Directions: From San Angelo Loop 306 head south on Knickerbocker Road to the airport. Turn left onto Reary Blvd and continue to Hangar Road. Turn right at the Skyline hangar and park in the parking lot. The seminar will be held in the flight school.
