

CFIT Awareness In The TX NM OK Corridor

This event examines the factors contributing to Controlled Flight Into Terrain (CFIT) within the unique geographic and meteorological landscape of the Texas, New Mexico, and Oklahoma corridor. Participants will review regional accident case studies and discuss practical risk-management strategies to enhance situational awareness during all phases of flight. The session aims to equip pilots with the tools necessary to recognize and mitigate terrain-related hazards in this high-traffic transition zone.

From San Angelo Loop 306 head south on Knickerbocker Road to the airport. Turn left onto Reary Blvd, and then another left on FAA Blvd to Hangar Road. Turn right on Hangar Road and park in the parking lot on the south side of Angelo State University building. Enter the building on the south side, and the classroom will be on the left side.
