

Monthly Safety Meeting

While pilots diligently monitor the ATIS for surface winds and altimeter settings, the mention of **Density Altitude** (DA) is frequently overlooked. Although often associated with mountain flying, high DA is a critical factor during "hot and heavy" summer operations at any elevation.

To mitigate the risks of operating in "thin air", Master Pilot Glenn Beavers has prepared a presentation to avoid the pitfalls of high-density altitude performance.

WINGS credit will be awarded to attendees.

Drive to 2907 Garnett Ave.
