

Give Garmin 430 Training for Christmas

Dec 16th & 18th two hour evening class, Dec 20th two sessions, one morning and one afternoon, of two hours.

Training includes 4 hours of classroom (instructor lead), and 4 hours of hands on laboratory training (Instructor lead).

The instructors are Garmin current and fly several times a day. The laboratory G430 looks and **performs exactly as one would in a real aircraft.** Turning knobs is done via a computer mouse.

We must have 12 attendees to hold the class, and pre-payment of \$120 is required. Refunds will only be given if the class does not make.

Training will be done in my simulator/classroom located on the northeast corner of State highway 152 and Morgan Road in Mustang, OK.

Call me for additional details.
