

What's in your Weather Tool Belt?

Who can't use another tool? Part aviation meteorology and part aviation weather resources. The meteorology portion includes topics such as low-level wind shear, turbulence, icing, and other issues critical to pilots. The second section will be about web resources (and smartphone apps), including a discussion about radar interpretation.

This seminar is assuming basic knowledge of METARS and TAFS and other coded weather products. For a refresher of any of these reports please review Weather Advisory Circular 00-45G Download here

Who should attend? Fixed wing pilots, Helicopter Pilots and any pilots who want another tool to help better understand the weather.

Directions: See Map
