

Optimum Weather Detection Tools

The world of weather briefings is changing! How do you make sense of conflicting information on a weather brief: There's an AIRMET for IFR but numerous products disagree. Which one is right? There's a few forecasts for Gusts to 40 knots, but no AIRMET or CWA. How do you validate that? In this 60 minute webinar followed by a Q&A, Delia Colvin, aviation weather expert, will show you effective ways to gain certainty and safety while evaluating the information. You'll also become familiar with some fantastic new tools. Click here to register today
