

FAASTeam presents:

Beyond the Weather Brief - Quick Steps to Improving Weather Certainty

The world of weather briefings is changing! How do you make sense of conflicting information on a weather brief: There's an AIRMET for IFR but other resources call for VFR. Which one is right?

There's a few forecasts for Gusts to 40 knots, but no AIRMET or CWA. How do you validate that? The best site to validate potential icing at any altitude. Locating potential turbulence or LLWS even when it's not forecast. The product you must add to your Standard Weather Brief. In this 90 minute webinar followed by a Q&A, Delia Colvin, aviation weather expert, will show you effective ways to gain certainty and safety while evaluating the information. You'll also become familiar with some fantastic new tools.
