In this 60 minute webinar you'll learn methods to do just that. Assess the potential hazards and how to avoid them.

- The top resource for assessing potential turbulence or mountain wave.
- Tools that most pilots rely on—that are not reliable (and what to use instead)
- How to determine if thunderstorms will be a factor
- Recognizing turbulence or LLWS even when it's not forecast.
- Identifying mountain weather hazards in areas with few reporting points.

Weather Risk Assessment

- Learn the top tools to identify each of the six hazards
- The tool most pilots rely on—that is actually the LEAST reliable tool (and what to use instead)
- How to identify “invisible” hazards.
- Recognizing LLWS even when it's not forecast.

This is our level 3 class for more experienced pilots, however, it can also benefit low time pilots.
