

Hangar Talk Saturdays (KVNY) Multi Engine Emergencies and Critical Decisions

Event Details

What happens when one engine suddenly stops producing power and the airplane begins yawing toward the failed side? Multi engine emergencies can escalate quickly and demand immediate, disciplined pilot action to maintain control and make sound decisions.

This seminar will review engine failure recognition, asymmetric thrust, V_{mc} considerations, single-engine performance limitations, and the importance of proper aircraft control during abnormal situations. Participants will discuss practical emergency procedures, common pilot errors, and real-world scenarios that demonstrate how preparation, proficiency, and situational awareness affect outcomes during high-workload events.

There is easy access from Balboa Blvd with plenty of free parking. Seminar length is 2 hours.
