

Hangar Talk Saturdays (KVNY) Night Flying

When the sun goes down, are you still flying VFR—or are you relying more on your instruments than you realize? Night flying offers some of the most rewarding views in aviation, but it also introduces unique hazards that can catch even experienced pilots off guard. Reduced visual cues, changing weather, optical illusions, and limited emergency landing options require a different approach to planning and decision making.

This seminar examines the practical aspects of flying after dark, including preflight planning, aircraft lighting, night vision, visual illusions, weather considerations, navigation, emergency preparedness, airport operations, and risk management. Through real-world examples and lessons learned, attendees will gain practical techniques for making every night flight safer and more enjoyable.

Easy access from Balboa Blvd. Plenty of free parking. Seminar length approximately 2 hours.
