

Hangar Talk Saturdays (KVNY) Cold Climate Land Survival

Would you know what to do if an emergency landing left you stranded in freezing temperatures? Surviving the landing is only the first step. Cold weather introduces unique survival challenges where exposure, hypothermia, and limited resources can quickly become life-threatening. Preparation and knowledge can make the difference between a successful rescue and a tragic outcome.

This seminar examines practical survival techniques for cold climate emergencies, including preflight preparation, survival kit planning, clothing selection, shelter construction, fire starting, signaling for rescue, food and water considerations, and the physiological effects of cold weather. Real-world examples and practical strategies will help pilots prepare for unexpected off-airport landings in remote or mountainous terrain.

Easy access from Balboa Blvd. Plenty of free parking. Seminar length is approximately 2 hours.
