

Hangar Talk Saturdays (KVNY) - Collision Avoidance and Situational Awareness

Event Details

Whether sharing the sky with another aircraft or encountering a flock of birds, how much time will you have to recognize the danger and react? Mid-air collisions and bird strikes present different challenges, but both demonstrate the importance of situational awareness, effective scanning, and timely decision making.

This seminar examines the causes and prevention of mid-air collisions and bird strikes, including visual scanning techniques, traffic pattern operations, radio communications, right-of-way rules, ADS-B capabilities and limitations, bird activity near airports, and wildlife hazards during critical phases of flight. Through accident examples and practical scenarios, attendees will explore techniques for recognizing potential conflicts, reducing exposure to hazards, and responding appropriately when avoidance is no longer possible.
