FAASTeam presents:

Hangar Talk Saturdays (KVNY) - Hypoxia

How would you know you were becoming hypoxic if hypoxia itself was impairing your ability to recognize it? Hypoxia is one of aviation's most insidious hazards because its effects can develop gradually while degrading judgment, coordination, vision, and decision making. A pilot may not realize that performance is deteriorating until the ability to respond appropriately has already been compromised.

Join Jill Dressel for an engaging exploration of hypoxia and its impact on pilots and passengers. The presentation will examine the types and causes of hypoxia, altitude-related physiological effects, individual differences in susceptibility, warning signs and symptoms, time of useful consciousness, and practical strategies for recognizing and preventing hypoxia. Real-world aviation scenarios will illustrate why preparation, oxygen awareness, and timely action are essential to maintaining safe flight operations.

Event Details

Sat, Nov 14, 2026 at 09:00 PST

LA Flight Academy

7900 Balboa Blvd
G6 Prop Park West

Van Nuys, CA
