FAASTeam presents:

Hangar Talk Saturdays (KVNY) - Single Pilot IFR

When flying IFR alone, who is managing the radios, navigation, weather, avionics, checklists, and unexpected problems while you fly the airplane? Single-pilot IFR operations place significant demands on a pilot's attention and decision-making abilities. Without another pilot to share the workload, even routine tasks can become challenging when conditions deteriorate or unexpected events occur.

This seminar explores the unique challenges of single-pilot IFR operations, including cockpit workload management, automation and avionics use, instrument scan, communication strategies, approach preparation, weather evaluation, task prioritization, and managing distractions. Through practical scenarios and real-world examples, attendees will examine techniques for maintaining situational awareness, recognizing workload saturation, managing unexpected events, and making timely decisions when operating in the instrument environment without a second pilot.
