FAASTeam presents:

Hangar Talk Saturdays (KVNY) - IFR Emergencies

When something goes wrong in instrument conditions, how prepared are you to manage the emergency while maintaining control of the aircraft? Emergencies are challenging under any circumstances, but limited visibility, high workload, and changing weather make them even more demanding.

This seminar examines common IFR emergencies, including electrical and instrument failures, navigation or communication loss, vacuum system malfunctions, deteriorating weather, icing, and unexpected performance changes. Through practical scenarios, attendees will explore emergency prioritization, partial-panel operations, ATC assistance, diversion decisions, and when to declare an emergency. The presentation emphasizes aircraft control, workload management, and timely decision making in instrument meteorological conditions.

Easy access from Balboa Blvd. Plenty of free parking. Seminar length approximately 2 hours.
