

IFR SOPs

SOPs generally start before the flight, and continue throughout the entire flight, ending after landing, when you taxi in, park the airplane and shut down on the ramp. They provide guidance to the pilots during each phase of flight, so the pilot(s) know what is expected. This results in a safer operation overall.

See how you can apply these to your flying, to be a better, safer IFR or VFR pilot, whether flying single pilot or as part of a crew. See what you think, and consider incorporating SOPs into your flight operations!

Speaker John Mahany is a Long Beach-based Master CFI with decades of experience in a wide range of aviation operations types.

Meeting room is the main facility for Hangar 21, where Magnolia Ave ends at Commonwealth Ave. This event will last approximately 1.5 hours.
