

FAASTeam presents:

IFR Roundtable: Circling Approaches

This event is part of our IFR Roundtable series of discussion groups, where advanced and novice IFR pilots share knowledge about particular aspects of instrument flight. Held every 6-8 weeks, we focus on one small IFR procedure or topic area and spend a couple of hours talking through challenges, definitions, techniques, and safety issues in that topic area. This session topic: Circling approach design and execution. Circling approaches present high workload and can be hazardous. Nevertheless, they are a fact of IFR life, particularly at smaller airports because of surrounding terrain or the high cost of approach development. We will review the design criteria that cause an approach to be titled for circling only, when circling minimums are excluded from a chart, when you can land straight in from a circling approach, and when you can circle from a straight-in approach. We will discuss chart notes, circling restrictions, and formulating a landing plan based on the approach path and runway layout. Finally, we will examine the critical execution of the circling missed approach maneuver. This is a group discussion, moderated by Brian Eliot, CFI, CFII. Any questions, contact us at (650) 946-1700 or brian@sancarlosflight.com. For more information about this, or any of our weekly Safety Seminars, please visit

Event Details

Wed, Oct 17, 2012 - 7:00 pm

San Carlos Flight Center

655 Skyway Road

Suite 215

San Carlos, CA 94070

**Contact: San Carlos Flight Center
