

FAASTeam presents:

Session seven of sixteen: Instrument Knowledge and Skills

Every year dozens of VFR only rated OR non-current (or non-proficient) IFR pilots become part of the accident statistic data. Human Factors is a critical cause of these occurrences. Weather (WX) is a critical factor as well. Aviation Training Curriculum invites you to join in learning vital skills that could save your life and improve your airmanship and decision making during this 16 part free 'weekly' seminar series. For additional details and fees on signing up for either the FULL gnd & flt course or gnd only course Contact Paul Weihs @ (408) 607-6078 or paul.weihs@AviationTrainingCurriculum.com

Emphasis is on Top-Down Flight Planning (TDFP) and organization of the overall planning process and the interrelationships between the different phases. Strategic analysis and management of flight risks is a core component as is the "go/no-go" decision.

Directions: US-101 exit Embarcadero Rd. Northbound

A message from the National FAASafety Team Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area
Sign up for the FAA's safety services at www.FAASafety.gov!
