

FAASTeam presents:

Dealing with Emergencies

Join us for a review of emergency situations and accident case studies. We will discuss handling different emergencies (engine failure, fire, electrical issues and more), including decision making and systems knowledge. We will look at different incidents, accidents, and stories to determine pilot judgement, ability, and chain of events leading to a successful or unsuccessful outcome.

Cirrus Aircraft representatives will also fly in with a new 2016 model SR22T aircraft to talk with us about the highlights of the amazing safety design features of Cirrus Aircraft. Please join us for this informative, practical, and fun seminar - whether you're currently flying a Cirrus, interested in the idea of flying a Cirrus, or simply want to expand your knowledge and awareness of its special safety design features. Yes, there will be great discussion about the famous CAPS (Cirrus Airframe Parachute System)!!

Directions: Flying in: Ask for parking at AeroDynamic Aviation. We are up taxiway Kilo. Park anywhere open on the ramp, plenty of spots should be available. Call to reserve. Driving: Exit hwy 68 toward Monterey Regional Airport on Olsted Road. Take the first road to the right (just before long-term parking) and drive toward the gate. Press the "Call" button to be allowed through the gate. Drive through and wait for the gate to close before continuing on toward our building. Park on the back side.
