Representative GREGORY HOBBS

The proper treatment and management of a general aviation piston engine goes a long ways towards getting the most life out of the engine. This seminar will address engine management topics that are of interest to all pilots. Some of the topics to be covered are:

- Leaning the engine: how, when and why
- Engine temperature management
- Various engine start procedures
- The importance of adequate oil level
- Detection of common in-flight engine anomalies and what to do

There will be an opportunity to ask questions about engine management and other aircraft maintenance topics. Bring your questions about aircraft maintenance.

Directions: Seminar will be held at Trade Winds Aviation. From Highway 680, exit onto Capital Expressway. Travel Southeast on Capital Expressway. At Cunningham Ave., turn Right. Trade Winds Aviation is straight ahead then on the right.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!

The FAA Safety Team (FAASTeam) is committed to providing equal access to this meeting/event for all participants. If you need alternative formats or services because of a disability, please communicate your request as soon as possible with the person in the "Contact Information" area of the meeting/event notice. Note that two weeks is usually required to arrange services.
