

FAASTeam presents:

In-Flight Weather Decision-Making

We usually focus on pre-flight weather briefings and deciding if we should launch or not. What about the in-flight decisions we make about the weather? How do we get information? What information is available? How can we use that information to improve flight safety and comfort? We'll examine several different specific instances of making important decisions while flying in the weather, based on real flight experiences.

Our speaker, Alan Marcum, PPASEL (Instrument), has been flying for over thirty years, from Cambridge, U.K. to Lihue, Hawai'i, in airplanes from a Tiger Moth and a Waco to a Malibu and a Mooney. He bases his Mooney at Palo Alto, where he learned to fly. Alan is a computer scientist by profession.

Directions: From highway 101 head east toward the bay, and take two immediate right-turns onto Skyway (along the west side of the airport). The Skyway building is on the left after the Aviation Museum.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!

The FAA Safety Team (FAASteam) is committed to providing equal access to this meeting/event for all participants. If you need alternative formats or services because of a disability, please communicate your request as soon as possible with the person in the "Contact Information" area of the meeting/event notice. Note that two weeks is usually required to arrange services.
