

FAASTeam presents:

ADS-B - What You Need to Know

The FAA is in the process of implementing a new system called Automatic Dependent Surveillance-Broadcast (ADS-B for short), which is designed to replace the ground-based radar system used by ATC to track air traffic throughout the US.

ADS-B is a foundational component of the FAA's NextGen system for improving the safety and efficiency of the National Airspace. By January 2020, ADS-B Out capability will be required in all airspace where a Mode C transponder is required today. Today, ADS-B In receivers offer free traffic and weather information.

This seminar will discuss what ADS-B is and its benefits. We'll take a look at how you can take advantage of ADS-B In capabilities today as an aircraft renter and important limitations. We'll also discuss some options for aircraft owners to equip for the 2020 ADS-B Out mandate.

Directions: From highway 101 head east toward the bay, and take two immediate right-turns onto Skyway (along the west side of the airport). The Skyway building is on the left after the Aviation Museum.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
