

FAASTeam presents:

# Unique IFR Approaches

Instrument pilots develop familiarity with instrument approaches based on a review of the approaches they typically fly. There is a lot of similarity among the information contained in the majority of approach procedures. Every now and then, you come across an approach that may make you stop and wonder what the notation means. Can there be a glide slope on an LDA? What are some of the more challenging holds that you might find?

San Carlos Flight Center invites Herb Patten, CFII, to share a select set of approach plates for their unique procedures. He will cover how to identify unique approach procedure notations and sift through the clutter to identify the vital differences.

While you may not actually fly one of these approaches, getting a broader exposure to some of them will make you a more informed instrument pilot. We will use examples of approaches from around the country. Join us to be a more prepared, and knowledgeable instrument rated pilot.

Herb Patten is the Chief Pilot at the San Carlos Flight Center, a CFI and an FAA certificated advanced and instrument ground instructor who teaches private pilot ground school at San Carlos

## Event Details

Wed, Apr 21, 2021 - 19:00 PDT
