

Aeronautical Decision Making and Proficiency Strategies

Single pilot IFR flying is one of the most challenging activities for most general aviation pilots. In this seminar, we will review risk management and aeronautical decision making in real world situations that every instrument rated pilot is likely to encounter. We will also discuss strategies for pilots to maintain proficiency and stay ahead of the airplane for confident flying in IMC.

Aerodynamic Aviation's front desk will direct all attendees to flight training the classroom where this presentation will be held..
