

Emergencies Are Analog

In-flight emergencies do not always present as clear, single-system failures. Many develop gradually and involve incomplete information, multiple indications, and competing priorities.

This seminar will explore practical decision-making during abnormal and emergency situations, including how pilots evaluate evolving problems, prioritize actions, and manage workload when systems do not behave exactly as we would expect. The discussion will focus on real-world judgment, the effective use of checklists, and maintaining situational awareness as conditions change.

This event will be held in the West Valley Flying Club conference room. From Highway 101, head east toward the bay and turn left just after the golf course. West Valley Flying Club is the second driveway on the right. Overflow parking is available in the golf course parking lot.
