

CFIT - Preflight Planning or Smack a Rock - - Your Choice

YOU are in command of a well-equipped and maintained turboprop aircraft. You are also instrument qualified and proficient. Your mission is to fly a simple milk-run of 62nm between two points that you are very familiar with.

What could possibly go wrong ? PLENTY !!!

Join us tonight as we unravel the senseless and *entirely preventable* CFIT tragedy of Ace Air 51. We will explore the facts of the matter from the NTSB Final Report and discover the *WHAT*, the *HOW* and the *WHY* it happened to the crew managing this flight, It could so easily happen to YOU as well. Then it's YOUR turn. You get to *plan* for this mission as if you are flying it yourself. Do you think your preflight planning is adequate to the task ? Perhaps you will discover a few shortcomings to your planning that you may not have previously considered. It could make all the difference to you arriving safely ... or not at all.
