

IMC/ VMC Club Meeting on ZOOM Lincoln EAA 1541

A short video of a flight situation that stops with asking . ' what would you do ?'

Then a discussion of the options to resolve the situation.

This pilot education meeting will have two "What Would You Do?" scenarios. The IMC scenario is a night IFR flight in IMC conditions and subfreezing temperatures that has to divert due to falling oil pressure and ATC instructs the pilot to descend earlier than desired for an instrument approach.

The VMC scenario is a first flight after annual inspection in a high performance single with retractable gear. The gear retract normally on takeoff but when gear extension is attempted the gear down lights do not illuminate although the gear appears to be down visually.
