

FAASTeam presents:

CFIT and Overreliance on Automation

CFIT identifies accidents where a pilot flies a perfectly good airplane, under control, into terrain. We will look at some example accidents and causal factors and identify ways to avoid CFIT accidents in our own flying. In some cases, CFIT accidents come about as a result of over reliance on automation – the autopilot may be flying you perfectly under control into the ground. We will look at some automation related accidents and incidents and explore how automation can be used to help, not hinder, your flying.

Directions: Hwy 101 North or South – exit at Airport Blvd. Go west on Airport Blvd, turn right on Skylane Blvd, second right into Sonoma County Office of Education (SCOE). Follow signs in building to meeting room.

A message from the National FAASafety Team Manager
