

High intensity glider operations area from surface to 17,999 MSL

High intensity glider towing area from surface to 15,000 MSL

High intensity glider activity in the BDU traffic pattern; increased vigilance recommended!

Avoid Mid-Airs!!

Over the past two decades there have been two fatal mid-air collisions, along with numerous close calls between powered aircraft and gliders in the vicinity of Boulder Municipal Airport (BDU). This special notice is being disseminated to increase airman awareness of the high intensity glider operations conducted in the vicinity of BDU. For more info contact: www.bouldercolorado.gov/airport **Increased vigilance is advised!**
