**Call for night-time PIREPs.**

The Aviation Weather Center is conducting a research project on low level turbulence away from the influences of terrain and in the presence of stronger wind. The AWC is requesting Pilots, controllers, and dispatchers make an extra effort to provide PIREPs below 12,000 feet during the nighttime hours--primarily from **0200 UTC through 1100 UTC**. The focus of this project runs across the central plains; from Texas to Canada, between the Rockies and the Ohio River Valley, any nighttime PIREP is greatly appreciated. The project runs through **September 1, 2012.**
